

PRESS RELEASE

Introducing Aspects USAT Conformance Test Platform!

Leiden, the Netherlands 26th May 2010: Collis is delighted to announce the launch of Aspects USAT Conformance Test Platform (Verify2 31.124), a must have Test Platform to ensure USAT conformance of mobile handsets. The Aspects USAT Conformance Test Platform is validated according to the GCF (Global Certification Forum) and PTCRB (PCS Type Certification Review Board) requirements.

Collis has been offering market leading test tools, consultancy and training for the mobile telecommunications industry for over a decade. The Aspects products portfolio from Collis consists of state-of-the-art test tools and test suites for card and handset testing.

Our test tools are used by card and handset manufacturers to develop and test products. They are also used by network operators to test interoperability. The Aspects brand of test tools use flexible Java APIs that take testing beyond standards conformance.

The Aspects USAT Conformance Test Platform offers cost-effective pre-conformance and conformance testing. It tests a handset's implementation of USAT functionality – a crucial element in overall interoperability testing. It gives handset manufacturers and Mobile Network Operators the confidence to launch a new handset on to an increasingly demanding market. The test platform uses the tried and trusted Aspects SmartStation3 for USIM simulations and the Anritsu MD8470A provides the network simulations. Test control and reporting is delivered by Aspects Verify2 31.124 application.

Aspects USAT Conformance Test Platform is easy to set up and use. The application provides central control for running USAT combined UTRA/GSM and USAT stand-alone test sequences as well as an immediate feedback on how the tests are progressing.

Berend van Geffen, Chief Commercial Officer, Collis comments: "We are extremely pleased to launch the Aspects USAT Conformance Test Platform in the mobile telecom market. The validation of the Aspects USAT Conformance Test Platform according to GCF/PTCRB specifications confirms its quality and robust performance capability. The Aspects USAT Conformance Test Platform gives mobile network operators the confidence that their value added products can be offered through the handset. It gives handset manufacturers the confidence that their handset will work against any conformant USIM card. Most importantly, it helps to boost subscriber satisfaction in the overall system. USAT conformance has never been easier!"
