

Collis and RFI Global deliver Proof of Concept to Singapore LTA

Singapore 14th April 2010: Collis together with RFI Global is pleased to announce that the proof of concept for Singapore Land Transport Authority has been delivered

Collis has been appointed to provide consultancy services and further enhance test procedures for smart cards used in transit for CEPAS certification for the Singapore Land & Transport Authority (LTA). Collis has partnered with RFI Global to deliver this project. The focus of this project is on testing and certification of type B contactless cards. In addition to this, Collis will provide test tools to ensure that contactless smart cards are compliant to CEPAS and RFI will deliver the RF and Protocol test tools. The test tools include the Collis Personalisation Validation Tool for contactless cards, Collis SmartWave Box and Collis Test Manager.

Silvester Prakasam, Fare System Director of LTA, comments: “During a recent business trip to the UK I had the opportunity to visit RFI and witnessed firsthand the ongoing work and finalisation of the proof of concept stage. I am pleased that in choosing both Collis and RFI to deliver this project we have selected two organisations with the expertise and experience to ensure a successful outcome.”

Colin Forrester, Strategic Partnerships Manager, RFI Global, said: “The proof of concept is an important milestone and has demonstrated that the approach being taken is the right one in enhancement of the CEPAS certification and testing program. RFI are delighted to be involved in this project with LTA, as we see that enabling smart cards in transport will be the dominant method of ticketing in future.”

Nathalie Ha, Sales and Marketing Director Asia Pacific at Collis adds: “Collis is pleased to deliver the proof of concept to LTA together with our partner RFI Global. This proof of concept is 1 step further towards enhancing the current certification process and strengthens quality control for the Singapore LTA. Collis is proud to support the LTA in the testing process for CEPAS certification to enable smart cards usage in transit in Singapore.”

About RFI Global

At RFI Global, we are a leading provider of testing, approval and consultancy services to the global technology market. As an independent private company, we use our depth of knowledge, high quality of service and over 20 years of experience to help guide your products through the approvals process, so you can bring them to market in the quickest possible time.

Our expertise covers a wide range of technologies including Cellular, Wireless and Smart Card technologies, with particular emphasis on convergent products (i.e. those that combine multiple technologies). We have been at the forefront of new developments for many years, and continue to do so in the mobile payments arena. Our experience in wireless communications, payment functionalities and security means we are uniquely positioned to help bring the worlds of payments and mobile devices together for the future.

We make it easier for you by offering a one-stop-shop for product testing and approvals, from testing to project management and consultative support. We also offer subcontract support for those who may need some technical assistance to take a product from the final stages of R&D to a market launch. www.rfi-global.com
