

News Release

MasterCard Supports Customers Migration to Chip-Based Payment Solutions in the UAE

Collis and MasterCard Hosts EMV *M/Chip*[™] Payment Solutions Symposium for Customers in the UAE

Dubai, UAE, 27 June, 2010 – MasterCard Worldwide together with Collis recently hosted a MasterCard EMV¹ *M/Chip* Payment Solutions Symposium for financial institutions in the UAE. The symposium was aimed at providing financial institutions a platform to gain further insights and knowledge into opportunities and challenges relating to the deployment of chip-based payment solutions.

The symposium presented the strategic rationale for migrating to MasterCard's globally established *M/Chip* technology. The more than 30 customer participants who attended the EMV *M/Chip* workshop gained valuable insights into the EMV architecture, MasterCard's *M/Chip* program and solution set, establishing migration project objectives, an implementation roadmap and requirements, and system and process impacts, from both the Acquirer and Issuer perspectives.

Chip cards are a vehicle for issuing banks to not only combat fraud but also develop more differentiated products and more value-added products and services for their MasterCard cardholders. At the same time, consumers have been able to benefit from multi-purpose payment cards and the peace of mind afforded by the enhanced security features built into EMV chip cards.

"We are delighted to have teamed up with MasterCard to provide their customers with a platform designed for those who want to know more about chip or representatives who are responsible for planning, testing, development, certification or implementation of chip," said, Jeroen Mulder, Manager Sales EMEA, Collis. "As knowledge experts in the financial industry, we are committed to providing MasterCard customers in the UAE with market-leading EMV and smart card solutions as they make the move to chip."

"We have been assisting our customer financial institutions and retailers globally to help them make smart choices in developing a customized approach towards chip," said Eyad Al-Kourdi, vice president and country manager, Southern Gulf - UAE, Qatar & Oman, MasterCard Worldwide. "The migration to EMV chip cards will provide for improved levels of payment security and also the opportunity for richer point-of-sale-transactions for example including new functions such as, loyalty rewards. As pioneers in chip-based payment solutions, we are committed to providing first-class advice and support to our customers in the UAE."

¹ EMV, an industry specification, which was established in 1994 is an acronym for Europay, MasterCard and Visa. It enables all merchants to utilize one terminal at point-of-sale to support any smart card regardless of the issuer or brand. The industry standard also enables interoperability and interchange for debit and credit card types.

MasterCard in the Middle East & Levant works closely with the company's Chip Solutions and Engineering Group based in Europe which is responsible for coordinating MasterCard's global chip strategy, defining and developing chip-based products, solutions and implementation processes (including approving vendor products), and ensuring customer deployments are interoperable and consistent with relevant industry standards. MasterCard has product staff based in the Middle East & Levant who ensure that MasterCard provides consistent service to vendors and customer financial institutions in the sub-region.

As of end 2009, there were over 487 million MasterCard branded EMV-Chip cards globally.
