

Collis announces first release of new Visa Mobile Payment Specifications Test Suite

Leiden, The Netherlands 2nd of February 2012: Collis proudly announces the first release of the Collis Visa Mobile Payment Specification (VMCPS) Test Suite.

The VMCPS Test Suite is used to perform functional testing of the UICC or Secure Element application based on Visa Mobile Payment Specifications (VMCPS). UICC or Secure Element vendors can use the Collis VMCPS Test Suite to perform a pre-certification on their VMCPS payment products. Pre-certification means that the Secure Element application conforms to all requirements in the VMCPS specification, and should not encounter problems during the approval by Visa International.

The test suite contains a total of 670 test cases and verifies the functional behaviour of a mobile payment application and can personalise all necessary card profiles. Scenarios have been designed to allow for the automated execution of test cases without the need for user interaction. The scenarios also foresee the (re)personalisation of the mobile payment application in case it is required by the test cases. The Collis VMCPS Test Suite shortens the development cycle, allows for pre-certification self-testing and ensures production quality assurance. This new release is part of a wider offering for mobile payments.

Berend van Geffen, Chief Commercial Officer adds: “Releasing the Collis VMCPS Test Suite demonstrates Collis’ commitment in having the most up-to-date and innovative test tools for mobile payments in the market today. This new test suite gives Smart Card en Secure Element vendors the ability to speed up certification according to Visa’s latest specifications. It also gives them confidence in knowing that the certified mobile payment applications are error-free and tested to the highest standard.”
